

**IN THE SPECIFICATION**

Please make the following changes to the specification:

[20] The air cleaner 14 includes a bottom surface 26, a first longitudinal side wall 28, a second longitudinal side wall 30 that is parallel to and spaced apart from the first longitudinal side wall 28, a first lateral side wall 32 interconnecting the first 28 and second 30 longitudinal side walls, and a second lateral side wall 34 that is parallel to and spaced apart from the first lateral side wall 32. The side walls 28, 30, 32, 34 cooperate with the bottom surface 26 to form a rectangular shaped box or drawer having an inner cavity 36.

[29] As shown in Figure 4, the radial seal air filter 38b is shorter in length than the first and second longitudinal side walls 28, 30 of the air cleaner 14. Thus, a gap 68 is formed between the air cleaner inlet 18 and the enclosed end 64 of the tube 60. Air flows into the air cleaner inlet 18, flows around the radial seal air filter 38b, flows through the filtering material 62 and into the tube 60, and flows out the tube end 66 via the air cleaner outlet 22.
